

Mobile Threat Prevention - Import devices to the dashboard using a CSV

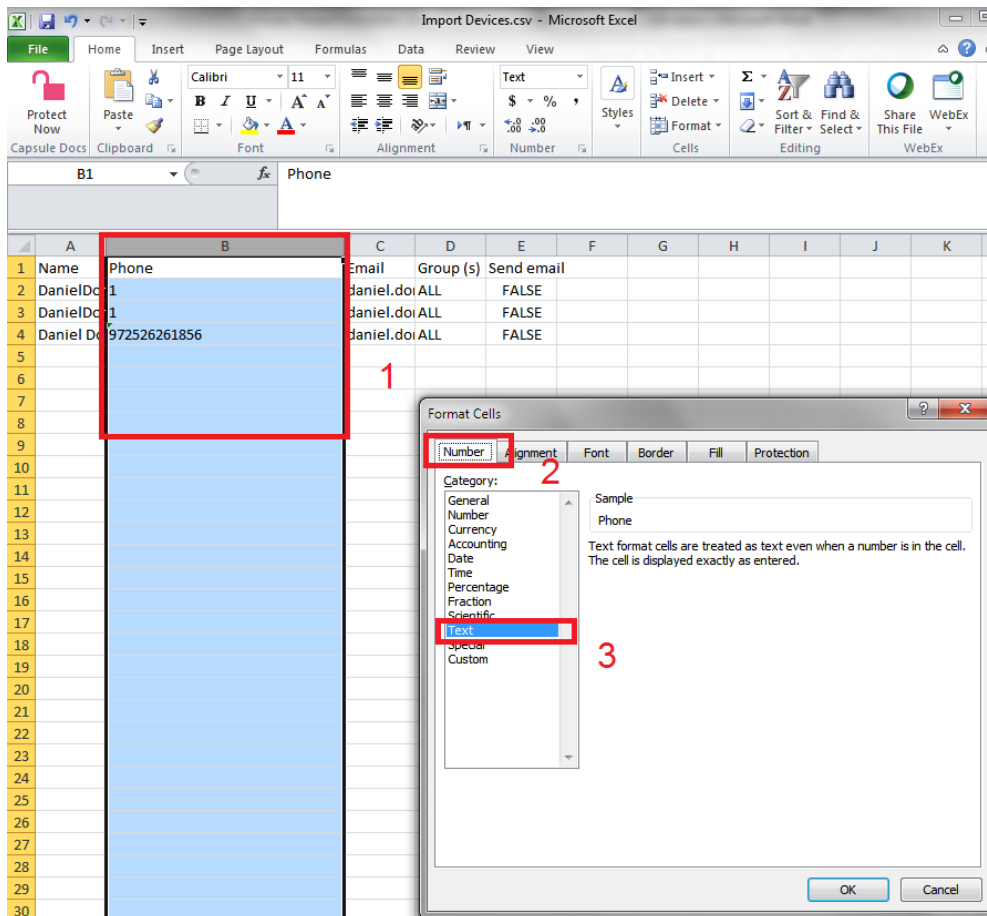

1. Step 1 – Make your CSV ready –

1.1. Get the template CSV file “Import Devices.csv”

1.2. make a list of devices you would like to import, using the structure below:

Name	Phone	Email	Group (s)	Send email
DanielDor	972526451223	daniel.dor.35@gmail.com	ALL	FALSE
DanielDor2	972526451222	daniel.dor.34@gmail.com	ALL	FALSE
Daniel Dor 3	972526451221	daniel.dor.36@gmail.com	ALL	FALSE

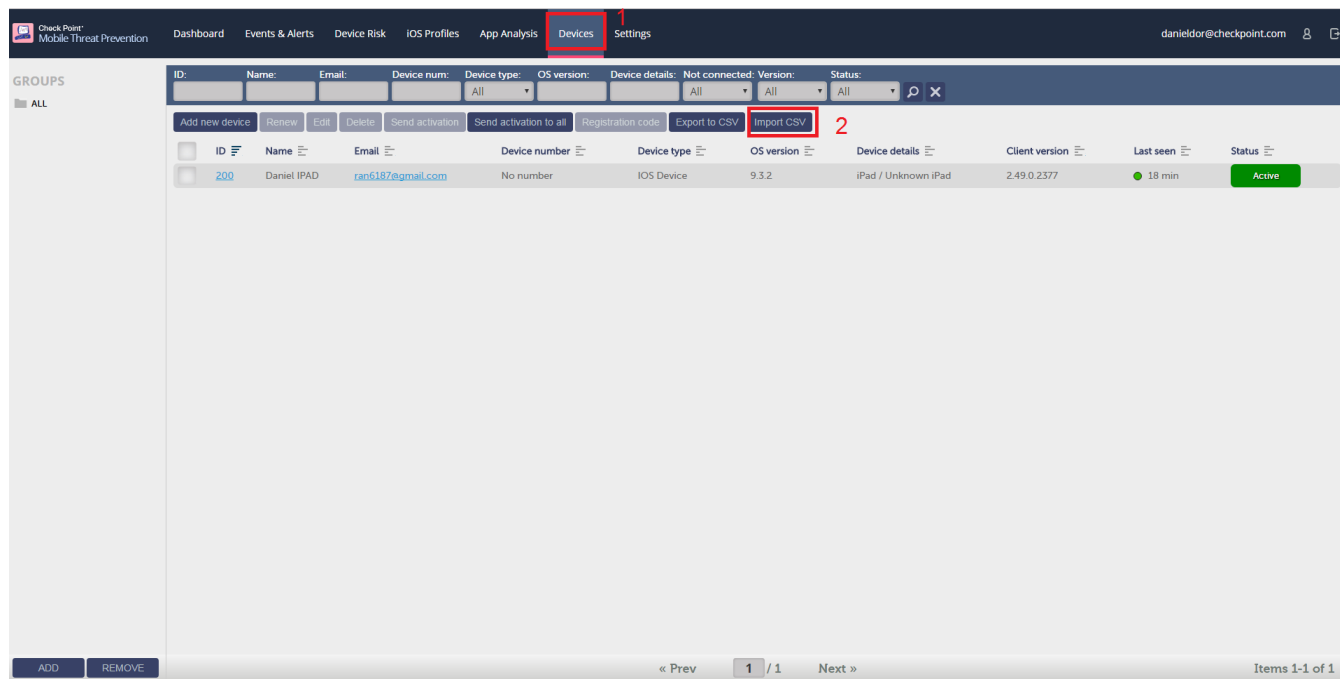

1.3. Make sure that the column “Phone” is in “Text Format” when editing the CSV File:

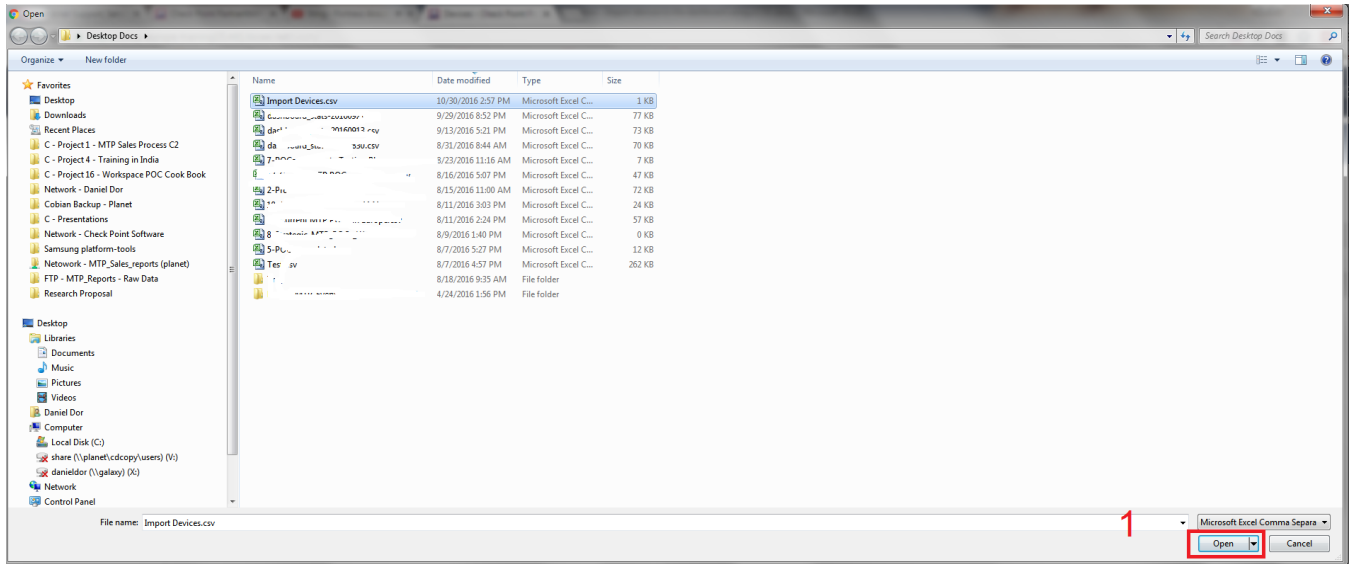

1.4. Before you save your CSV and Exit, please check the following things:

- 1.4.1. If the file has only one line without headers it will not work (Currently the dashboard get stuck without an error and we open a bug to have a clear error).
- 1.4.2. If the file has multiple lines the first line will not be imported (The yellow one in the sample above)..
- 1.4.3. All 5 fields must be used. If one of them is missing, the process will fail (with an error).

2. Step 2 – go to your Dashboard URL -> go to “Devices” tab -> Import CSV

3. Step 3 – Pick the file -> Click Open:

4. Step 4 – See that all devices were imported to dashboard:
